What is eFax?

eFax is an email-based faxing service, providing cost-effective fax solutions since 1995. eFax eliminates the need for a fax machine, extra fax line and all the associated expenses. Send and receive faxes directly by email. It's quick, private, reliable and convenient.

How does eFax work?

1. Someone sends a fax to your eFax number.
2. You receive the fax as an email attachment.
3. You can send faxes just as easily.

What if we already have a fax number?

It is possible to keep your current fax number. Simply contact your phone company and call-forward the number to your new eFax number. Or use your eFax number instead and stop paying the high cost of an extra fax line.

Are eFax numbers real fax numbers?

Yes. With eFax, you'll choose either a regular or toll-free fax number in the city of your choice. Your number picks up just like a regular fax machine, complete with the beeps and screeches—but you'll never hear them. When someone faxes to your number, the fax is digitally converted to a file that is emailed to you as an attachment.

How will we receive faxes?

They arrive by email as attachments. Also, you can check your faxes by logging into the eFax Message Center at www.efax.com. With eFax you can choose to receive faxes as TIFs, PDFs or compact EFX files that you can edit with our free eFax Messenger® software.

How do we send faxes with eFax?

It's easy to send faxes with eFax. Simply attach a file to an email and address it to the recipient's fax number followed by @efaxsend.com, for example, 13238173207@efaxsend.com. Click send and the recipient will receive the document at their fax machine

Can we fax from more than one computer?

Yes. You can send and receive faxes from any computer, laptop or wireless handheld that has email access. And you can share your eFax number with up to 5 different email accounts, so your employees can get important faxes simultaneously.

Do we have to install fax software?

No, you can send and receive faxes using your existing email system. However, eFax does offer eFax Messenger, free fax editing software that makes viewing, sending and organizing your faxes quick and easy. eFax Messenger lets you sign a document and fax it without having to print it out. You'll also have access to all the fax numbers and contact information in your Outlook address book—no more mistyping fax numbers. And the best part of Messenger is it's free. Go to www.efax.com and click Downloads to download your copy.

Does eFax have a "print-to-fax" function?

Yes. When you install our free eFax Messenger software, just print any file and send it as a fax. For example, your assistant is finished with a Word file she needs to fax. Normally she would print it and then fax it with a machine. With eFax Messenger, she clicks File > Print and selects eFax Messenger as her printer. The page is automatically converted to a fax ready to send. This works with Word documents, Excel spreadsheets, PowerPoint presentations—any file you can print.

Can faxes be saved?

Yes. Save a fax just like you would any email attachment and they'll only be a click away. You can also access your faxes online by logging in at www.efax.com.

How reliable is eFax?

eFax has developed the largest digital fax network in the world with local numbers available in over 3,200 cities worldwide and toll-free numbers covering the U.S. and Canada. The eFax network offers a 99.5% up-time—no one will ever get a busy signal and you'll never worry about running out of paper or toner. If you ever have any questions, your eFax membership includes live phone support.

Are there long-term contracts?

There are no long-term contracts with eFax. If you ever need to cancel your account, we have 24-hour Customer Service Representatives to assist you.

This offer is only good for monthly subscriptions in US currency.
